

The listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A heat treatment method comprising the steps of:
holding a treatment object in a processing ~~chamber filled with a coolant for~~
~~cooling the treatment object;~~ chamber;
heating the treatment object by irradiating it ~~through radiation~~ with light from a
lamp light ~~source;~~ source during a first period, while supply of a coolant is kept in the
processing chamber; and
cooling the treatment object during a second period, while supply of the coolant
is kept in the processing chamber,
wherein said lamp light source is turned on and ~~[[the]]~~ a radiation from said lamp
light source is held for 0.1 to 20 seconds ~~at a time, while supply of the coolant is kept, in~~
the first period,
wherein a temperature drop rate by the supply of the coolant is 50 to 150° C per
second in the second period, and
wherein one cycle including the first period and the second period is repeated
several times.

2. (Withdrawn) A heat treatment method comprising the step of:
heating a treatment object by irradiating it through radiation from a lamp light
source,
wherein the radiation from said lamp light source is pulsatively repeated several
times such that the treatment object holds the temperature to its highest for 0.5 to 5
seconds.

3. (Currently Amended) A heat treatment method comprising the steps of:
holding a treatment object in a processing ~~chamber filled with a coolant for~~
~~cooling the treatment object; and~~ chamber;
heating the treatment object by irradiating it ~~through radiation~~ with light from a
lamp light ~~source;~~ source during a first period, while supply of a coolant is kept in the
processing chamber; and
cooling the treatment object during a second period, while supply of the coolant
is kept in the processing chamber,
wherein ~~[[the]]~~ a radiation from said lamp light source is held for 0.1 to 20
seconds at a ~~[[time,]]~~ time in the first period,
wherein the radiation from said lamp light source is repeated several ~~times, while~~
~~supply of the coolant is kept,~~ times in the first period,
wherein a temperature drop rate by the supply of the coolant is 50 to 150° C per
second in the second period, and
wherein one cycle including the first period and the second period is repeated
several times.

4. (Withdrawn) A heat treatment method comprising the steps of:
holding a treatment object in a processing chamber filled with a coolant; and
heating the treatment object by irradiating it through radiation from a lamp light
source,
wherein the radiation from said lamp light source is repeated several times such
that the treatment object holds the temperature to its highest for 0.5 to 5 seconds.

5. (Currently Amended) A heat treatment method comprising the steps of:
holding a treatment object in a processing chamber ~~filled with a coolant for~~
~~cooling the treatment object; and~~ chamber;

heating the treatment object by irradiating it ~~through radiation~~ with light from a lamp light source, source during a first period, while supply of a coolant is kept in the processing chamber; and

cooling the treatment object during a second period, while supply of the coolant is kept in the processing chamber,

wherein said lamp light source is turned on and ~~[[the]]~~ a radiation from said lamp light source is held for 0.1 to 20 seconds ~~at a time, while supply of the coolant is kept, in~~ the first period,

wherein said lamp light source is turned off while a treatment of increasing the amount of supply of the coolant ~~as one cycle is repeated several times~~ so that a temperature drop rate is 50 to 150° C per second in the second period, and

wherein one cycle including the first period and the second period is repeated several times.

6. (Withdrawn) A heat treatment method comprising the steps of:

holding a treatment object in a processing chamber filled with a coolant; and

heating the treatment object by irradiating it through radiation from a lamp light source,

wherein said lamp light source is turned on while an amount of supply of the coolant is reduced,

wherein said lamp light source is turned off while a treatment of increasing the amount of supply of the coolant as one cycle is repeated several times, after the treatment object holds the temperature to its highest for 0.5 to 5 seconds.

7. (Original) A heat treatment method according to claim 1, wherein said lamp light source is selected from the group consisting of a halogen lamp, a metal halide lamp, a xenon lamp, a high pressure mercury lamp, a high pressure sodium lamp and an excimer lamp.

8. (Withdrawn) A heat treatment method according to claim 2, wherein said lamp light source is selected from the group consisting of a halogen lamp, a metal halide lamp, a xenon lamp, a high pressure mercury lamp, a high pressure sodium lamp and an excimer lamp.

9. (Original) A heat treatment method according to claim 3, wherein said lamp light source is selected from the group consisting of a halogen lamp, a metal halide lamp, a xenon lamp, a high pressure mercury lamp, a high pressure sodium lamp and an excimer lamp.

10. (Withdrawn) A heat treatment method according to claim 4, wherein said lamp light source is selected from the group consisting of a halogen lamp, a metal halide lamp, a xenon lamp, a high pressure mercury lamp, a high pressure sodium lamp and an excimer lamp.

11. (Original) A heat treatment method according to claim 5, wherein said lamp light source is selected from the group consisting of a halogen lamp, a metal halide lamp, a xenon lamp, a high pressure mercury lamp, a high pressure sodium lamp and an excimer lamp.

12. (Withdrawn) A heat treatment method according to claim 6, wherein said lamp light source is selected from the group consisting of a halogen lamp, a metal halide lamp, a xenon lamp, a high pressure mercury lamp, a high pressure sodium lamp and an excimer lamp.

13. (Withdrawn) A heat treatment method comprising the step of:
heating a treatment object having a semiconductor film by irradiating it through radiation from a lamp light source,
wherein the radiation from said lamp light source lasts 0.1 to 20 seconds at a time,
wherein the radiation from said lamp light source is repeated several times.

14. (Withdrawn) A heat treatment method comprising the steps of:
holding a treatment object having a semiconductor film in a processing chamber filled with a coolant; and
heating the treatment object by irradiating it through radiation from a lamp light source,
wherein the radiation from said lamp light source is held for 0.1 to 20 seconds at a time,
wherein the radiation from said lamp light source is repeated several times.

15. (Withdrawn) A heat treatment method comprising the steps of:
holding a treatment object having a semiconductor film in a processing chamber filled with a coolant; and
heating the treatment object by irradiating it through radiation from a lamp light source,
wherein said lamp light source is turned on and the radiation from said lamp light source is held for 0.1 to 20 seconds at a time, while an amount of supply of the coolant is reduced,
wherein said lamp light source is turned off while a treatment of increasing the amount of supply of the coolant as one cycle is repeated several times.

16. (Withdrawn) A heat treatment method according to claim 13, wherein said lamp light source is selected from the group consisting of a halogen lamp, a metal halide lamp, a xenon lamp, a high pressure mercury lamp, a high pressure sodium lamp and an excimer lamp.

17. (Withdrawn) A heat treatment method according to claim 14, wherein said lamp light source is selected from the group consisting of a halogen lamp, a metal halide lamp, a xenon lamp, a high pressure mercury lamp, a high pressure sodium lamp and an excimer lamp.

18. (Withdrawn) A heat treatment method according to claim 15, wherein said lamp light source is selected from the group consisting of a halogen lamp, a metal halide lamp, a xenon lamp, a high pressure mercury lamp, a high pressure sodium lamp and an excimer lamp.

19. (Previously Presented) A heat treatment method according to claim 1, wherein the coolant is an inactive gas comprising at least one of nitrogen and helium.

20. (Previously Presented) A heat treatment method according to claim 3, wherein the coolant is an inactive gas comprising at least one of nitrogen and helium.

21. (Previously Presented) A heat treatment method according to claim 5, wherein the coolant is an inactive gas comprising at least one of nitrogen and helium.
